

S&C Intelligence Platform

The AI-native strength & conditioning system for competitive tennis and padel players

The Opportunity

Padel is one of the fastest-growing sports worldwide (19M+ players, court count growing ~16% year-on-year), and tennis has a large, mature competitive base — yet neither has a digital S&C product that reasons like a real athletic trainer. Existing apps are either generic fitness templates or elite/team-sport tools priced out of reach for the individual competitive player.

What We've Built

A working technical prototype — mobile app, AI decision engine, and backend — validated end to end, not just a deck:

- Adaptive periodization that generates and adjusts training blocks automatically, not static templates
- Injury-risk detection (load history + injury record + pain signals) with plain-language explanations
- Calendar-aware tapering: adding a tournament automatically reduces training load in the right window — and restores it if the event is cancelled
- Automatic exercise substitution on pain signals, with safety guardrails for minors and disordered-eating signals

Why It's Different

Capability	Generalist fitness apps	Elite/team-sport tools	Us
Sport-specific programming	No	Yes	Yes
Adapts to competition calendar	No	Partial	Yes
Injury-risk detection	No	Yes (enterprise-priced)	Yes (consumer-priced)
Accessible to individual players	Yes	No	Yes

Business Model

Freemium → Premium/Pro subscription (B2C), plus per-athlete licensing for academies, clubs and coaches (B2B) — sequenced padel-first, then tennis, consistent with where the growth and the whitespace both are today.
